Sani Sport

The science of common sense

***It's time to clean
up your game!***

The Sani-Sport machine will clean and sanitize all your sports equipment and protective gear.

BioMedco, a world renowned microbiology laboratory, has deemed Sani-Sport to be the most effective technology regarding bacteria and virus reduction. Sani Sport is used by over 90% of all individuals and businesses in the protective equipment cleaning industry.

Why use Sani-Sport?

MRSA or Methicillin Resistant Staphylococcus aureus has, in recent years, become a dangerous and important issue in the sports world. Many NHL and NFL Players have been hospitalized due to bacteria from their equipment entering their bodies through a cut or abrasion

Don't let this happen to you!

Sani-Sport will quickly and efficiently disinfect hockey and other sports equipment ridding it of bacteria and unpleasant locker room smell leaving a pleasant scent after treatment. The Sani Sport process will destroy 99% of dangerous bacteria and fungi, entero and influenza viruses, keeping players safer, healthier, and happier.

How does it work?

Sani-Sport kills unwanted harmful micro-organisms and eliminates unpleasant odors by exposing materials with 2 cycles of ozone along with a patented spray application containing natural Tea Tree oil. The final treatment is an anti-bacterial protective spray to discourage bacteria from returning.

Who uses Sani-Sport?

There are currently 27 NHL teams, 13 NFL teams and 6 CFL teams who use the Sani-Sport at their home rink or training facility.

"The machine has been extremely helpful in terms of protecting our players from injuries. We also find that the equipment itself lasts longer and is in better condition because of the Sani-Sport Treatment."

-Rip Simonick, Head Equipment Manager, Buffalo Sabres
